Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE <u>3</u> MONTH(S) FROM
THE MAILING DATE OF THIS COMMUNICATION.
- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed
  after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
  Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any
  earned patent term adjustment. See 37 CFR 1.704(b).

Status

1)☒ Responsive to communication(s) filed on <u>19 July 2004</u>.

2a)☒ This action is **FINAL**.   2b)☐ This action is non-final.

3)☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is
closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

4)☒ Claim(s) <u>1-14</u> is/are pending in the application.

　4a) Of the above claim(s) _____ is/are withdrawn from consideration.

5)☐ Claim(s) _____ is/are allowed.

6)☒ Claim(s) <u>1-14</u> is/are rejected.

7)☐ Claim(s) _____ is/are objected to.

8)☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

9)☐ The specification is objected to by the Examiner.

10)☐ The drawing(s) filed on _____ is/are: a)☐ accepted or b)☐ objected to by the Examiner.

　Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).

　Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).

11)☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

12)☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).

　a)☐ All b)☐ Some * c)☐ None of:

　　1.☐ Certified copies of the priority documents have been received.

　　2.☐ Certified copies of the priority documents have been received in Application No. _____.

　　3.☐ Copies of the certified copies of the priority documents have been received in this National Stage
　　application from the International Bureau (PCT Rule 17.2(a)).

　* See the attached detailed Office action for a list of the certified copies not received.

Attachment(s)

1)☒ Notice of References Cited (PTO-892)

2)☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)

3)☐ Information Disclosure Statement(s) (PTO-1449 or PTO/SB/08)
　Paper No(s)/Mail Date _____.

4)☐ Interview Summary (PTO-413)
　Paper No(s)/Mail Date. _____.

5)☐ Notice of Informal Patent Application (PTO-152)

6)☐ Other: _____.

DETAILED ACTION

1.   This Action is in response to Amendment filed 7/19/04, which has been fully considered.

2.   Amended claims 1-6 and new claims 7-14 have been presented for examination.

3.   This Action is Final.

Claim Rejections - 35 USC § 102

4.   The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed
in the United States before the invention by the applicant for patent or (2) a patent granted on an application for
patent by another filed in the United States before the invention by the applicant for patent, except that an
international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this
subsection of an application filed in the United States only if the international application designated the United
States and was published under Article 21(2) of such treaty in the English language.

5.   **Claims 1-5** are rejected under 35 U.S.C. 102(e) as being anticipated by Prinzing (US

6,496,202 B1) (hereinafter Prinzing).

6.   Prinzing is cited by the Examiner in a previous Office Action.

7.   As for claim 1, Prinzing discloses a method for visualizing any architecture during

conceptual, development and deployment phases of a system, said method comprising the

steps of:

receiving information regarding an event (col. 5, lines 48-60);

determining a look of an application (col. 4, line 66 – col. 5, line 19);

determining a feel of an application (col. 4, line 66 – col. 5, line 19);

receiving events at an event service delivery agent (col. 4, lines 25-35; col. 6, lines 44-55;

controller 512, Fig. 5B);

forwarding the events to a model component of the architecture in the form of callbacks

(col. 6, lines 44-55);

reading configuration information during initialization at application startup (This step is

considered inherent for presenting the initial GUI view of the application, because the GUI

could not be presented without first being configured and initialized.), wherein the

configuration information is adaptable to a plurality of different middlewares (Java, SGML,

and HTML are middleware independent languages. See previously cited US 6,275,225 B1,

lines 38-43.; col. 9, lines 14-24; col. 10, lines 64-66); and

presenting the associated behavior of the system (col. 6, lines 38-43).

8.   As for claim 2, Prinzing teaches the method of claim 1, wherein said step of presenting

comprises the step of presenting said architecture in simulation mode (col. 4, lines 47-55).

9.   As for claim 3, Prinzing teaches the method of claim 1, wherein said step of presenting

comprises the step of presenting said architecture in a continuous, free-running mode (col. 4,

lines 58-65).

10.   As for claim 4, Prinzing teaches the method of claim 1, wherein said step of presenting

comprises the step of presenting a deployed implementation of the architecture (col. 6, lines

56-65).

11.   As for claim 5, Prinzing teaches the method of claim 1, wherein said configuration

information further comprises:

abstract information in the form of tiers, components, communication paths and events

(col. 6, lines 44-55; col. 7, lines 34-51);

presentation information in the form of how many display views are required to present

the architecture, and how to respond visually when events are received (col. 6, line 56 – col.

7, line 16);

controller information that may specify details that determine how the particular

controller implementation behaves (col. 6, lines 44-55; col. 16, lines 30-33); and

integration information that may be used by the particular implementation of an event

service delivery agent (col. 5, lines 6-19; col. 5, lines 48-60).

Claim Rejections - 35 USC § 103

12.   The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all

obviousness rejections set forth in this Office action:

> (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in
> section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are
> such that the subject matter as a whole would have been obvious at the time the invention was made to a person
> having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the
> manner in which the invention was made.

13.   **Claims 6-10, 13 and 14** are rejected under 35 U.S.C. 103(a) as being unpatentable over

Prinzing (US 6,496,202 B1) (hereinafter Prinzing) in view of Kuznetsov (US 6,772,413 B2)

(hereinafter Kuznetsov).

14.   Kuznetsov is newly cited by the Examiner.

15.   As for claim 6, Prinzing discloses an architecture visualization system for visualizing any

architecture during conceptual, development or deployment phases of a system, said

architecture visualization system further comprising:

a model component for receiving information regarding events (model 506, Fig. 5A; col. 4, lines 15-24);

a view component for determining a look of an application (view 504, Fig. 5A; col. 4, lines 15-24);

a controller for effectively determining a feel of the application (controller 512, Fig. 5A; col. 4, lines 25-35);

an event service delivery agent for receiving and delegating requests (col. 5, lines 55-67); and

a configuration (col. 5, lines 6-18), wherein the configuration is adaptable to a plurality of different middlewares (Java, SGML, and HTML are middleware independent languages. See previously cited US 6,275,225 B1, lines 38-43.; col. 9, lines 14-24; col. 10, lines 64-66).

Prinzing does not specifically disclose using XML to specify the configuration. Kuznetsov teaches using XML to specify a configuration in order to accommodate multiple protocols and formats (col. 1, lines 47-55; col. 5, line 43 – col. 6, line 10). It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Prinzing by using XML to specify the configuration in order to accommodate multiple protocols and formats, as taught by Kuznetsov above.

16.   As for claim 7, Prinzing discloses a system for visualizing an application architecture, the system comprising:

an event service interface for receiving events (col. 5, lines 55-67; col. 17, lines 45-60);

an event service delivery agent for receiving the middleware or protocol independent events and managing delivery of events to an application (col. 5, lines 55-67);

a model component for receiving middleware or protocol independent events from the

event service delivery agent (model 506, Fig. 5A; col. 4, lines 15-24);

a view component receiving middleware or protocol independent events from the model

component, the view component for visualizing behavior of an application during at least one

of conception, development, and deployment of the application (view 504, Fig. 5A; col. 4,

lines 15-24); and

a controller for managing the behavior of the application, an implementation of the

controller being adaptable based on the middleware communicating with the application

(factory 502, Fig. 5A; col. 2, lines 7-19; col. 5, lines 29-47).

Prinzing does not specifically disclose translating middleware or protocol dependent

events into middleware or protocol independent events. Kuznetsov teaches translating

middleware or protocol dependent events into middleware or protocol independent events in

order to accommodate multiple protocols and formats (col. 5, lines 4-20; col. 5, line 59 – col.

6, line 10). It would have been obvious to one of ordinary skill in the art at the time of the

invention to modify Prinzing by translating middleware or protocol dependent events into

middleware or protocol independent events in order to accommodate multiple protocols and

formats, as taught by Kuznetsov above.

17.   As for claim 8, Prinzing does not specifically disclose using XML to specify the

configuration for creating implementations of the event service delivery agent and the

controller. Kuznetsov teaches using XML to specify a configuration for creating

implementations of an event service delivery agent and a controller in order to accommodate

multiple protocols and formats (col. 1, lines 47-55; col. 5, line 43 – col. 6, line 10). It would

have been obvious to one of ordinary skill in the art at the time of the invention to modify

Prinzing by using XML to specify the configuration for creating implementations of the

event service delivery agent and the controller in order to accommodate multiple protocols

and formats, as taught by Kuznetsov above.

18.   As for claim 9, Prinzing discloses a system similar to claim 8, wherein the controller

manages behavior of the application based on at least one of information received from the

view component, the model, and configuration information related to the controller (col. 2,

lines 7-19; col. 5, lines 29-47).

19.   As for claim 10, Prinzing discloses a system similar to claim 8, wherein the configuration

information comprises:

abstract information in the form of tiers, components, communication paths and events

(col. 6, lines 44-55; col. 7, lines 34-51);

presentation information in the form of how many display views are required to present

the architecture, and how to respond visually when events are received (col. 6, line 56 – col.

7, line 16);

controller information that may specify details that determine how the particular

controller implementation behaves (col. 6, lines 44-55; col. 16, lines 30-33); and

integration information that may be used by the particular implementation of an event

service delivery agent (col. 5, lines 6-19; col. 5, lines 48-60).

20.   As for claim 13, Prinzing discloses a system similar to claim 7, wherein the view

component creates a visualization based on configuration information (col. 4, lines 15-24;

col. 6, lines 56-65).

21.   As for claim 14, Prinzing discloses a system similar to claim 7, wherein the event service

delivery agent forwards events to the model component as a callback instruction (col. 5, lines

48-67).

22.   **Claims 11 and 12** are rejected under 35 U.S.C. 103(a) as being unpatentable over

Prinzing and Kuznetsov in view of Huang et al. (US 6,714,217 B2) (hereinafter Huang).

23.   Huang is cited by the Examiner in a previous Office Action.

24.   As for claim 11, Prinzing and Kuznetsov do not specifically disclose creating different

views of the application depending on whether the system is in a conception mode, a

development mode or a deployment mode. Huang teaches creating different views of the

application depending on whether the system is in a conception mode, a development mode

or a deployment mode for the purpose of configuring, testing and monitoring a

communications network (col. 3, lines 8-34). It would have been obvious to one of ordinary

skill in the art at the time of the invention to modify Prinzing and Kuznetsov by creating

different views of the application depending on whether the system is in a conception mode,

a development mode or a deployment mode for the purpose of configuring, testing and

monitoring a communications network, as taught by Huang above.

25.   As for claim 12, Prinzing and Kuznetsov do not specifically disclose slowing down event

visualization in a demonstration mode. Huang teaches slowing down event visualization in a

demonstration mode in order to allow a user to see messages traveling on a simulated

network (col. 25, lines 27-37). It would have been obvious to one of ordinary skill in the art

at the time of the invention to modify Prinzing and Kuznetsov by slowing down event

visualization in a demonstration mode in order to allow a user to see messages traveling on a

simulated network, as taught by Huang above.

Response to Arguments

Claim Objections

26.   Objections to claims 3-5 are hereby withdrawn in view of Amendment.

112 Claim Rejections

27.   The rejection of claims 1-6 under 35 USC 112, second paragraph, is hereby withdrawn in

view of Amendment. With respect to the limitation "a feel" of an application, the Examiner

finds that the limitation is not indefinite but merely broad. The Examiner interprets that "the

feel" may reasonably be interpreted to mean visual characteristics or behavioral

characteristics of an application.

102 Claim Rejections

28.   Applicant's arguments filed 7/19/04 with respect to claims 1-7 have been considered but

are moot in view of the new ground(s) of rejection.

The Examiner notes that the limitation of a system for use during conceptual,

development or deployment phases of a system, as recited in the preamble of claims 1 and 6,

holds no patentable weight because the limitation is directed towards the intended use of the

invention (see MPEP 2111.02).

Second, the Examiner points out that limitations from the specification have no direct

bearing on the claims. Therefore, any differences between the configuration information of

the applied prior art and the configuration information as presented in the specification but

not explicitly claimed are moot.

Conclusion

29.   The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure: US 6,697,825 B1, note abstract.

30.   **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time

policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE

MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until

after the end of the THREE-MONTH shortened statutory period, then the shortened statutory

period will expire on the date the advisory action is mailed, and any extension fee pursuant to

37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

however, will the statutory period for reply expire later than SIX MONTHS from the mailing

date of this final action.

31.   Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Aaron C Perez-Daple whose telephone number is (571) 272-

3974. The examiner can normally be reached on 9am-5pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, John Follansbee can be reached on (571) 272-3964. The fax phone number for

the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
